Interesting Fact

There are few activities in life that utilizes the entire brain, and music is one of them. With Functional Magnetic Resonance Imaging (fMRI), a research team recorded a group of individuals who were listening to music. They found that listening to music recruits the auditory areas, and employs large-scale neural networks in the brain. In fact, they believe music can activate emotional, motor, and creative areas of the brain.

This Week's Featured Film

Storyline

Mame is an unconventional individualist socialite from the roaring 20's. When her brother dies, she is forced to raise her nephew Patrick. However, Patrick's father has designated an executor to his will to protect the boy from absorbing too much of Mame's rather unconventional perspective. Patrick and Mame become devoted to each other in spite of this restriction, and together journey through Patrick's childhood and the great depression, amidst some rather zaney adventures.
